## Qualifications:

IO Academy SDE - 2024

BASI Level 2 Snowboard

Instructor - 2024

## Skills:

HTML, CSS,

JavaScript

Tailwind, React,

Node.js

PHP, Laravel,

MySQL

## Hobbies:

Game Dev (Godot)

Steam Web API

Snowboarding

Exercise

## Interests:

Biology, Evolution,

Paleontology and

Paleoanthropology

Counter-Strike trading and

cosmetic market

# Junior Developer

Since I can remember I have been fascinated with technology and the process of how an input can effect pixels on a screen.

After graduating 6th form I knew my path was set in software and I searched for an intensive proffessional training program, which lead me to IO Academy where I was accepted for a government funded place to train full time in full stack development.

Since then, I have been continuing my learning through various online means, such as Codecademy and the Harvard CS50, which I am completing currently.

## Projects:

### Invoicing App

- Frontend made in ReactJS for an invoice app. In the app you are able to sort, view, create and mark as paid the invoices.

### Music Player App

- Backend made in PHP used in combination with a MySQL database for a spotify-like music playing app. Playing or favouriting a song would load a query to update the database.

### Darker Screen App

- A simple application made in C++ that overlays a black window over the entire screen with an adjustable opacity via a slider.

## Job History:

- **Team Member**, 9/2024 to present  
**Everyman Media Group** – Bath
